DETAILED ACTION

Response to Arguments

1. In view of the appeal brief filed on 10/18/2004, PROSECUTION IS HEREBY REOPENED. Claims 1-18 are allowed for reasons stated below.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Ron Schoenbaum on 3/15/2005. Claim 16 has been amended as follows:

16. A system for conducting voice based searches within a domain of items, comprising:

a speech recognition system that interprets voice search queries from users; and
a grammar which specifies to the speech recognition system valid utterances for interpreting the voice search queries, wherein the grammar comprises both single-term and multi-term utterances derived from the items within the domain, and said multi-term utterances consist primarily of forward combinations derived from phrases within text of the items, said grammar generated using a computer system that translates a phrase

into a set of utterances containing (a) individual terms of the phrase, and (b) all ordered combinations of two or more consecutive terms of the phrase.

Allowable Subject Matter

3. The following is an examiner's statement of reasons for allowance: Bennett et al. (US 6615172) teach a retrieval system having speech recognition capability. A client device processes a spoken query into compressed acoustic MFCC vectors and transmits them to the speech recognition server for further processing. The speech recognition server converts received data into text, which is then converted to SQL query by the natural language processor. A search operation is executed based on the SQL query generated (*the operation of figure 1*). Brown et al. (US 6604075) teach a method of generating grammars for used in speech recognition system (*the operation of figure 1*). Both Bennett et al. and Brown et al. fail to specifically disclose a method of generating speech recognition grammars that contains both individual terms of the phrase, and all ordered combinations of two or more consecutive terms of the phrase. Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to modify either Bennett et al. and/or Brown et al. to realize the claimed invention. Therefore, claims 1-18 are allowed over prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
